Introduction

The Hospital In-Patient Enquiry (HIPE) scheme is a health information system designed to collect clinical and administrative data on discharges from, and deaths in, acute hospitals in Ireland.[1] It is the principal source of national data on discharges from acute hospitals. The Healthcare Pricing Office (HPO) oversees the administration and management of this scheme, including the development and support of the data collection and reporting software, training of coders and data quality audit, reporting, and responding to requests for data.[2] The figure below summarises the HIPE data collection and reporting process. Further information on the development of the HIPE scheme can be found in our annual report series.[3]

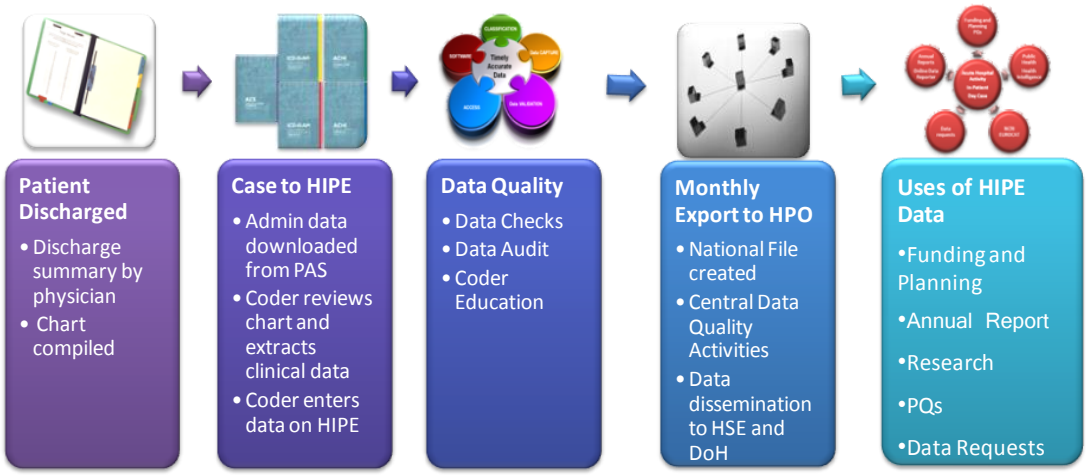

Figure: The HIPE Data Collection and Reporting Process

[1] The Hospital In-Patient Enquiry (HIPE) scheme was established in 1971 by the Health Research Board (HRB). Between 1990 and 2013 the Economic and Social Research Institute (ESRI) oversaw the administration and management of this scheme on behalf of the Health Service Executive (HSE) and the Department of Health (DoH). From January 1, 2014 the National Casemix Programme and the Health Research and Information Division at the ESRI became the Healthcare Pricing Office (HPO). This Office has responsibility for the HIPE scheme. While the HPO will initially be established on an administrative basis, in the HSE, it is planned that this Office will ultimately be established on a statutory basis. This development is in line with the proposals in the 'Money Follows the Patient' policy paper published by the Department of Health in February 2013.

[2] The HPO also has responsibility for the National Perinatal Reporting System (NPRS). Between 1999 and 2013 the ESRI oversaw the administration and management of this system on behalf of the HSE and the DoH.

Objectives of HIPE Data Dictionary Version 6.0

HIPE collects information on in-patient and day patient activity from participating hospitals. A HIPE discharge record is created when a patient is discharged from (or dies in) hospital. This record contains administrative, demographic and clinical information for a discrete episode of care. An episode of care begins at admission to hospital, as a day or in-patient, and ends at discharge from (or death in) that hospital.

This dictionary provides definitions and codes for data collected within HIPE as of 2014. It provides standard definitions for variables with the objective of ensuring that consistency and data quality are maintained. It is also hoped that the dictionary will be of use to researchers, clinicians and hospital management in understanding and analysing HIPE data.

Using the Data Dictionary

The HIPE Data Dictionary contains publicly available information. Internal variables relating to data quality and the HIPE database structure are not included. Other exclusions from the HIPE Data Dictionary Version 6.0 are data and non-HIPE cases collected from 01/01/2014 through the HIPE system but not included in the national file.[4]

All variables are listed alphabetically and an alphabetic index is included in the table of contents. The code sets used for variables are listed in Appendix I and can be accessed via hyperlinks. Appendix II provides the ASCII file name for all variables. For information on the classifications for diagnoses and procedures and the Casemix classification and grouping software see Appendix III.

A glossary of abbreviations is provided in Appendix IV and hyperlinks to source documents and organisations are provided in Appendices V and VI respectively.

[4] From the 01/01/2011 all cases categorised as in-patients or day cases are to be downloaded from the hospital PAS to HIPE, including those cases not normally coded on HIPE. It is expected that the additional cases in the download will be for non-acute (not normally coded) activity on the hospital campus such as rehabilitation or psychiatry. The Healthcare Pricing Office identifies for individual hospitals, a list of wards which should be downloaded as part of this change. These additional downloaded records are not included on the national file.
For patients discharged on or after 01/01/2011, the HIPE record will also collect information on internal ward transfers of the patient during the episode of stay. This information is typically stored in a "ward transfer file" or "ward transfer database" as part of the PAS/HIS system. This information will be downloaded to the HIPE portal and can be viewed by the coder but cannot be amended. The information will be exported by the hospital monthly to the Healthcare Pricing Office as part of the normal export process.

Updates
This document will be updated as variables are added or amended.

Summary of Changes between version 1.0 and 2.0 of Data Dictionary

Addition of variable: Oncology Day Ward Flag to store the value of oncology day ward repeat status.
Addition of code set: RepeatStatus; values for Oncology Day Ward Flag.
Addition of Blackrock Hospice to hospital codes code set.

Summary of Changes between version 2.0 and 3.0 of Data Dictionary

The migration from Windows HIPE (a windows based data entry and reporting system) to the HIPE Portal (a web based portal based on SQL server) has resulted in changes to variable names.

Changes to Variable Name
Diagnoses: Rename variables from diag-CxDIA → **DIAG1–DIAG30**
Diagnosis Consultants: Rename variables from DCON - CxCON → DIAGCONS1 – DIAGCONS30
Procedures: Rename procedure variables from PROC –PkPRO → PROC1-PROC20
Procedure Consultants: Rename procedure consultant variables from PCON – PkCON → PROCON1-PROCON20
Procedure dates: Rename procedure date variables from P1Date or Theatre → PROCDATE1- PROCDATE20
Procedure Anaesthetist: Rename procedure date variables from P1ANA-PkANA → ANACONS1-ANACONS20
Additional Variables in 2011
Hospital Acquired Diagnosis
Health Insurer
Parity Live births
Parity Still births
Procedure dates
Days in Semi Private Bed
Changes to Data Entry Guideline Number of Days in Intensive Care Environment

Additional Codes to Code sets
Additional **Specialty** Code 2605 Breast Surgery
Hospital code for removal of temporary transfer code for CUMH

Summary of Changes between version 5.0 and 6.0 of Data Dictionary

Some changes to this data dictionary reflect the transfer of HIPE from the ESRI to the HPO.

Additional Variables

- **Batch Coded**
- **Date First Coded**
- **Last Changed Date/Time**

Update variable information to reflect establishment of HPO

- **Admitting Consultant**
- **Discharge Consultant**
- **Hospital Number**

Changes to Variable label

- **Marital/Civil Status updated to Civil Status**

Code Set Changes

- **Area of Residence -** added Croatia and Switzerland, updated The Netherlands (Holland)

Changes to Data Entry Guideline

- **Mode of Emergency Admission** data entry guideline was updated

Additional Appendix

- **ASCI I File Names**

Removal of variables from data dictionary as these are not available on national file

- **Additional consultant involvement - encounter consultant**
- **Additional consultant involvement - encounter position**
- **Additional consultant involvement - encounter type**

Page Layout

While each page does not necessarily include all fields, each page in the data dictionary has a consistent format as follows:

Variable	Name of variable
Definition	Provides a description of the variable.
Definition Source[5]	What is the source of the definition of this information - e.g. HPO
Source	Information may come from Chart, Hospital PAS, assigned by HPO or it may be derived from other variables.
Collected since[6]	Month and year when collection of variable commenced.
Collected/Derived	Is this variable collected from Chart or is it derived from the HIPE Portal data entry software?
Code Set	Details the information options available for each variable.
Data Entry Guideline	Provides further guidance on how a variable is assigned to case.
Variable Name	Variable name in Portal
Data Type	Integer or Alphanumeric
Field Size	Number of characters in the variable
Populated in National File	If no, this variable is only populated in the hospital version of HIPE and is not available on the national file.
Reported by	Who reports this variable? This will generally be the Hospital.
Reported for	For what cases/discharges is this information reported?
Order in Instruction Manual	The HIPE Instruction Manual forms part of the training material provided by the HPO. It provides details of administrative and demographic variables collected and is updated to reflect any changes or updates in data collection, this order is numerically based.
Irish Coding Standard	The Irish Coding Standards are used in conjunction with the International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, Australian Modification (ICD-10-AM), Australian Classification of Health Interventions (ACHI) and Australian Coding Standards (ACS) and apply to all activity coded in HIPE in Ireland.

[5] As the ESRI oversaw the administration and management of the HIPE scheme on behalf of the HSE and the DoH for the period between 1990 and 2013, *ESRI HIPE Unit,* may be recorded as the definition source for a number of variables.

[6] Between 1990 and 2013 the ESRI managed the HIPE scheme; variables in operation prior to this data will be marked as pre-1990.

Admitting Consultant

Variable	**Admitting Consultant**
Definition	The consultant who admits the patient. If there is no clear information on the chart on the identity of the admitting consultant, the code for the primary consultant is used. Each consultant has a unique number/code assigned by the HPO, which may not be used for any other consultant. The unique number assigned by the HPO is encrypted to a unique alphanumeric code when HIPE data are exported from the hospitals. The encrypted values are stored on the HIPE National File and it is not possible to ascertain the identity of individual consultants from any of the consultant fields in the National File.

Non Acute Length of Stay: Temporary Leave Days

Variable	**Non Acute Length of Stay: Temporary Leave Days**
Definition	Number of days a patient did not spend in hospital during an episode.
Definition source	DoH
Source	Chart
Collected since	2007
Collected/Derived	Collected
Code Set	
Data Entry Guideline	A patient is temporarily discharged when: the patient is allowed to leave the hospital for a short number of days; their bed in hospital remains for their use and is not available for another patient; the patient returns after the specified amount of time to continue their ongoing care. Temporary Leave Days do NOT apply in the following situations: 1) patient is considered clinically discharged but continues to reside in a bed prior to transfer elsewhere 2) patient is temporarily sent to another hospital for a day to undergo a particular procedure 3)patient returns home during a day and returns to hospital before midnight 4) patient returns home for more than 3 days and is then readmitted.

Number of Days in Intensive Care Environment

Variable	**Number of Days in Intensive Care Environment**
Definition	This identifies the number of days, or part thereof, the patient spent in an intensive care environment e.g. ICU/ITU/CCU/HDU/NITU etc.
Definition source	ESRI HIPE Unit
Source	Hospital PAS
Collected since	1996 - optional; 2002 - mandatory. 2011 - definition revised from "based on midnight census" to "can be based on midnight census".
Collected/Derived	Collected
Code Set	
Data Entry Guideline	The midnight census can be used to determine the number of days spent in these environments. If the patient spends less than 1 day in these environments and is not present at the time of the midnight census, a stay of less than one day can optionally be recorded as '1' day. Where part of day is spent in ICU the allocation of public/private/semi- private days can be adjusted accordingly.
